

Navigator™

Equipment Management System

It brings a lot to the table – and every other area of care.

For your surgical teams, every minute matters. So it's vital to organize and optimize your OR for peak performance and flexibility. Which is why the Nuvo Navigator™ Equipment Management System is designed to be one of the most valuable surgical tools in the room. The multi-configurable Navigator helps make the most of your operating room's space by putting all the equipment you need into one movable, flexible management system whose benefits include:

Reduced turnover time

The self-contained Navigator system eliminates the need to wheel bulky, separate pieces of equipment in and out of the OR between surgeries, thus dramatically reducing transition time. Navigator lets you schedule more patients per OR per day—and that means a healthier bottom line for you.

Maximum efficiency

By keeping what's needed close at hand (and what isn't out of the way), Navigator maximizes the efficiency of the surgical team. Its tower-like design keeps cauterization units, laparoscopic and arthroscopic equipment, and keyboards and monitors within easy and immediate reach. What's more, Navigator's portability allows surgeons and staff to move around the operating table more quickly and easily.

Cord confusion eliminated

Thanks to Navigator's advanced cable management system, power cords and other cables are not only clearly organized, but also kept off of the floor, protecting them from contamination and preventing tripping hazards. Numerous built-in AC outlets within the shelves can accommodate a full suite of powered equipment.

Navigator Features

"Hideaway" phone and data ports keep the staff in contact with other care areas.

Built-in gas & vacuum ports reduce excess hoses and bring needed convenience to the surgical team.

The Navigator provides ergonomic mounting support for accessories such as suction canisters, IV poles and/or monitors.

Low-profile side rails provide additional accessory mounting and convenient channeling to keep cables out of the way.

Easily accessible brake controls allow for sturdy and certain positioning around the surgical environment.

A newly-designed "smooth-move" boom arm system allows ultimate flexibility of placement with comfort and ease.

Abundant throughway for power cables, gas hoses and video cables can accommodate future expansions.

Adjustable shelves are available in 22" or 30" widths.

Unlocking of each rotational joint independently, or simultaneously from the brake handle assures optimal positioning of critical equipment.

Integral electrical outlets supply power to critical equipment on the shelves and other auxiliary equipment needed in the care area.

ULTIMATE FLEXIBILITY NOW AT YOUR FINGERTIPS

ICU

With the Navigator in the ICU, the caregiver has an unimpeded and flexible working environment. Gas connections, IV poles, patient monitors and critical equipment are off the floor, all contained in a single location but immediately accessible on demand.

General Surgery

The versatility of the Navigator Equipment Management System allows for a near-infinite range of custom configurations based on specialty. A service head can be designed by our clinical specialists for every critical patient care area.

GI & Endoscopy

Increase the number of procedures in a given space by centralizing your equipment off the floor. Mount a flat panel monitor or vital signs monitor. Support your endoscope camera, light source and scope holder all conveniently within arm's reach. Rotate the head to accommodate an upper or lower procedure.

Emergency Room

Provide clinically-correct positioning of essential equipment around the entire trauma bay, not just the head. Have access to medical gases, suction, electrical outlets and data ports in treatment areas.

Flexibility from the top down

With a range of boom and pendant configurations, the Navigator can fit any facility, adapt to any surgical application as well as meet any other special (or spacial) requirements. Manual and motorized options, superior ease of movement and solid braking are hallmarks of the Navigator, bringing together excellence in design, exceptional performance and outstanding value.

NUVO - Operating in the patient's best interest

For nearly 20 years, our sole focus at Nuvo has been to provide the medical field with the highest quality, most cost-effective surgical lights, tables, equipment management systems, video integration and other products for hospital operating rooms. All of which can greatly help you make a difference in the care of your patients.
